

Installation instructions for the YM-3 pressure gauge

The pressure gauge is installed near the ventilation unit so that the internal pressure inside the cover can be monitored. The pressure gauge lead-in is placed in the location shown in the installation plan.

The YM-1 lead-in piece and the YM-3 pressure gauge consist of the following parts.

1. Lead-in piece
2. Thread converter and threaded pipe
3. Cap
4. Reducing nipple
5. Compression elbow connector
6. Copper pipe
7. Plastic hose
8. Pressure gauge (including liquid bottle)

- The pressure gauge is installed with the two screws supplied with the package. It is important during installation that the product is installed horizontally.
- The pressure gauge is filled with the liquid supplied. There are separate instructions for filling the liquid in the meter packaging.
